

## About Us

Discover how Dr. James J. Bendell and the staff at Cosmedica utilize the latest laser technology to enhance your youth and beauty.

Under Dr. Bendell's care, you will find qualified, knowledgeable medical professionals dedicated to fulfilling your desires and protecting your privacy. Dr. Bendell, Ms. Leslie Bendell, Ms. Jill Weiss, and Ms. Tara Williams are all experienced and fully certified in the use of our lasers.

## M.D. Forté

Cosmedica at The Women's Center features the M.D. Forté skin care product line, available **exclusively** at physician offices. Only M.D. Forté products offer the scientific advantage

of combining glycolic acid with the process of partial neutralization. This allows the creation of products with significantly higher concentrations of glycolic acid while maintaining a pH closer to that of normal skin. Whatever your skin type, you can enjoy maximum results with less irritation through a personalized regimen designed by us to cleanse, renew, hydrate, and protect your skin.

## TREATMENTS THAT SHOW IMMEDIATE AND LONG LASTING RESULTS

Today's advanced laser technology allows us to safely, easily, and effectively perform many cosmetic procedures, including removal of unwanted hair, skin discoloration, wrinkles, and facial and leg veins.

Why needlessly suffer? Use laser light to renew and refresh your appearance. Medical lasers use an intense beam of light to gently remove unwanted, damaged or diseased cells without harming the surrounding healthy cells. At Cosmedica, we are experts at treating cosmetic skin conditions using "no downtime" technology. We have the ability to safely provide unparalleled results using state-of-the-art laser technology and skin products. We are very proud to offer these exceptional services in an environment that pampers you with comfort, confidentiality, and professionalism.

### Experience the latest in medically-proven, professionally-supervised laser skin care treatments.

#### Skin Rejuvenation

For fresher, younger looking skin, enhanced skin rejuvenation corrects pigmentation irregularities and smoothes out fine lines and wrinkles. In this treatment, we combine the deep penetration of our Lyra laser with the surface capabilities of the Aura laser. The result is the stimulation of new collagen growth that smoothes out existing wrinkles and the gentle removal of blemished or sun damaged skin. This procedure is effective for the face as well as the chest, neck and hands - anywhere that sun damage and aging is visible.

#### Acne

With this exciting new advancement in the treatment of acne, we use our FDA-approved green laser to deliver light directly through the skin's surface to the core of the lesion. The laser light stimulates the body's natural immune system thereby irradiating problem-causing bacteria. This simple treatment quickly, safely and effectively reduces the severity of current and future breakouts.

#### Vein and Vascular Treatment

Laser treatments can help your legs look their most beautiful. This proven treatment has given us a method for vein removal that is safer, faster, and more effective than any previous treatment. Many veins will disappear immediately, and there are fewer side effects than alternative treatments.

#### Skin Discoloration

Skin conditions such as Roseacea and telangiectasias (broken capillaries) can now be effectively and easily treated. The laser works by heating the hemoglobin within the veins; the heat causes the internal walls of the vein to collapse permanently. Results can sometimes be seen after only one treatment, depending on individual circumstances and desired results.

#### Hair Removal

Now you can obtain long-lasting results with laser hair removal treatments. The Lyra *i* laser has been approved by the FDA for permanent hair reduction on **all skin types**, including very fair skin and olive or African-American skin. The laser is so safe, it was the first laser cleared by the FDA for the treatment of pseudo-folliculitis, a painful condition also known as "shaving bumps".

leave your skin looking better than ever
